

FIRAS BOUZAZI

Data Engineer | Nantes, France | +33 7 77 23 16 92 | firas.bouzazi@imt-atlantique.net | linkedin.com/in/firas-bouzazi

PROFILE

Data Engineer with two years of experience building real-time ingestion pipelines and cloud-native lakehouse platforms on AWS and Databricks. Comfortable owning a pipeline end to end, from change-data capture and streaming ingestion through orchestration, governance and monitoring. Seeking a full-time Data Engineering or Cloud Data Infrastructure role from October 2026.

EXPERIENCE

Data Engineer — Internship

04/2026 – 09/2026

Sopra Steria

Nantes, France

- Designed and delivered scalable ingestion pipelines for the client GEODIS, processing high-throughput supply-chain data at peaks of 5k events/sec with Apache NiFi, Apache Kafka and Databricks (Spark).
- Built and maintained production Airflow DAGs on Astronomer with retry logic, alerting and monitoring, improving pipeline reliability and cutting job failures.
- Contributed to the Cloudera to Databricks migration, re-platforming legacy workloads onto the lakehouse and reducing infrastructure complexity.

Data Engineer — Part-Time

09/2025 – 04/2026

ServicePower

Paris, France

- Implemented a real-time AWS lakehouse using Debezium (CDC), Amazon MSK and Apache Flink, unifying streaming ingestion from heterogeneous sources (SQL Server, Oracle, DB2).
- Built a transactional data lake on Amazon S3 Tables (Apache Iceberg), governed through AWS Glue Data Catalog and Lake Formation for secure, schema-evolving datasets.
- Built and maintained Domo dashboards delivering real-time operational and performance insight to clients.
- Set up Datadog monitoring and alerting across the data lakehouse architecture (streaming pipelines, Kafka, S3 Tables and Flink jobs), surfacing failures and latency issues before they reached downstream consumers.
- Benchmarked ClickHouse, DuckDB and Trino, and issued the query-engine recommendation adopted for the analytics stack.

Data Engineer — Internship

04/2025 – 08/2025

Inveniam (acquired by ServicePower)

Paris, France

- Designed and deployed an automated archiving pipeline moving PostgreSQL data to Amazon S3 on Airflow and AWS ECS, validated with Amazon Athena for zero data loss.
- Tuned S3 lifecycle policies and pipeline scheduling to reduce storage and compute costs.

Data Analyst — Internship

06/2023 – 08/2023

STMicroelectronics

Ariana, Tunisia

- Analysed two years of software-license usage data and built Python/SQL dashboards (Plotly, Power BI) supporting cost-optimisation and license-allocation decisions.

PROJECTS

Real-Time Lambda Architecture | *Kafka, Spark Streaming, Cassandra, Grafana*

- Implemented a Lambda architecture combining real-time and batch processing of cryptocurrency market data, with live KPIs and alerting in Grafana.

Personalised E-Commerce Analytics Platform | *Kafka, Amazon Redshift, Elasticsearch, SBERT*

- Built Kafka-based clickstream ingestion feeding dual pipelines: an OLAP pipeline (Amazon Redshift + Grafana) for business analytics and a semantic recommendation pipeline (Elasticsearch + SBERT) for personalised product suggestions.

TECHNICAL SKILLS

Languages: Python, SQL, Java, Scala

Data Engineering: Apache Kafka, Spark, Flink, Airflow, NiFi, Debezium (CDC), Apache Iceberg

Cloud & Platforms: AWS (S3, MSK, Glue, Lake Formation, Athena, Redshift, ECS), Databricks, Cloudera, Astronomer

Storage & Query Engines: PostgreSQL, Amazon Redshift, Trino, DuckDB, ClickHouse, Cassandra, Elasticsearch

Monitoring & BI: Datadog, Grafana, Power BI, Domo, Plotly

EDUCATION

IMT Atlantique

2024 – Present

Engineering Degree — Computer Science

Nantes, France

SUP'COM — Higher School of Communication of Tunis

2022 – 2024

Engineering Degree in ICT — Specialisation in AI and Telecommunications

Ariana, Tunisia

CERTIFICATIONS & LANGUAGES

Certifications: Astronomer Airflow: Fundamentals & DAG Authoring (double certification); AWS Academy Data Engineering

Languages: English: C1 (IELTS, TOEIC); French: fluent; Arabic: native
